

MetalCast[®]

Formglas

Introducing MetalCast®

Formglas

By combining metal powders, minerals and glassfibers, MetalCast® elements equal or surpass the elegant beauty of conventional castings.

The 1/4" (6mm) thick copper, brass, bronze and nickel - silver elements are custom manufactured into any intricate shape with precise detail.

For interior use only, typical applications are mouldings, door surrounds, columns and panels.

Years of experience and the latest technologies guarantee that any of the Formglas family of products are the best available.

MetalCast® is non-combustible, non-toxic, lightweight and is installed by carpenters using standard tools.

Like the real thing

MetalCast® has an uneven buffed/burnished appearance that is enhanced by reveals or similar relief. It is not available in a bright polished finish, nor is it suited for large plain surfaces.

The Formglas companies, established first on the North American continent and now worldwide take pride that, for over 30 years their products and service have been considered among the best.

A dedicated staff of well over 100 is committed to quality, and management's construction background guarantees customers that parts are engineered for smooth and safe installation.

A world wide network of Agents, and Sales offices in Tokyo - Japan and Kuala Lumpur - Malaysia, ensures expert advice to Architects, Designers and Installers.

In addition to MetalCast®, Formglas custom manufactures:

- * QuarryCast® - Molded Stone;
- * Formglas G.R.G. - Glassfiber Reinforced Gypsum;
- * Formglas E.P. - Glassfiber Reinforced Cement.
